

# Activity 1

- Extend what you have been introduced to in the aforementioned slides and create a database named “myTimetable” – which literally will have to be a database duplicate of your timetable. To mark the database, you will have to show a copy of your timetable as well as the relevant SQL used to create the database version of myTimetable.
- You will need the following tables:
  - DayTable
  - TimeRangeTable (45 minute interval time ranges from 08:00 to 16:20)
  - SubjectTable >> Only subject code such as for example “IFS02A1”
  - ScheduleTable >> This table should be created last and will have references from the day, time and subject tables.
- Please note – you will have to create ScheduleTable last and you will have to insert data into the table last. You cannot use an object before you created an object.

# Activity 1

- Name your SQL script file xxxPrac1 where xxx is your student number.
- Zip your file.
- Upload the zipped file onto Moodle before 2025-03/02 at 23:59.
- No late submissions will be marked.
